1. Create a free Zello account which you will use for the gateway or use existing.
2. Add the account to one or more channels eg: 001english-eu.ddns.net
3. In the list of contacts select those channels (hold Ctrl to select multiple), then use menu Tools > Create group… Enter "**Zello Gateway**" as group name and click OK. You must use that group name exactly.
4. Exit Zello app using Menu > Exit.

(VERY IMPORTANT, MUST USE MENU AND EXIT!!!)

5. Locate **Zello.config** file. It's normally can be found in Zello folder:

   C:\Users\YOUR USER NAME HERE\AppData\Roaming\ZelloDesktop

6. Open the file in any text editor (eg Notepad), locate attribute named **SetGatewayMode** and change its value to **true**. (Delete false and replace with the word true)
7. Save the changed file.
8. Start Zello app. Now it will start in radio gateway mode and you can proceed to configuration of the gateway options under Tools > Options > Radio
